

### Sanhua products are very simple and very stable – this is what OEMs need – WAMAK case

Family owned company WAMAK, Ltd founded in 2004 from Slovakia is a producer of industrial and commercial heat pumps, air-water, brine-water and water-water heat pumps as well as, customized versions.

As WAMAK mission says: “Our focus is always on the **quality of selected components** entering the production, **quality of our own manufacturing processes and on the final quality control**. The most important component however is the continuity of cooperation with our key suppliers and the information and experience which has been exchanged between each other. That helps us to guarantee a very high level of stability, high performance numbers and very important long life of our heat pumps.”

Such approach makes brand WAMAK a well-known and respected player in the heat pump market all over Europe.

Following these principles WAMAK cooperates with SANHUA deploying SANHUA components into the production of our heat pumps achieving **maximization of energy use from the source with the best performance and optimizing energy efficiency**.

SANHUA products and solutions improve efficiency providing at the same time ECO-Solutions for low carbon footprint of HVAC-R systems.

Managing Director Mr. Marian Maruniak says: “**Sanhua products are very simple and very reliable** – this is what is required by OEMs because of SANHUA’S expertise, a quick system integration of Sanhua components was possible and helped us to improve not only the stability of our heat pumps operation but performance as well. Through excellent technical support, we were able to combine our existing control system directly with Sanhua products which eliminated previous multiple control connection. Gained effect was a more **precise, quick and reliable system control**, operation and valuable feedback needed for future service. Communication with Sanhua has always been very professional, fast, friendly and down to business. “
